Commentary on the Metaphysics

Originally published in 1950. For those interested in the fundamental problems of philosophy but not familiar with its technicalities, this book introduces the main types of problem in metaphysics, not by a catalogue of philosophers' opinions but by a continuous train of reasoning. The central theme is the problem of the relation between mind and matter, and in the course of the argument there are discussions of mechanistic materialism, of idealism and our knowledge of the external world, and of the arguments for the existence of God. The problems are presented lucidly but without over-simplification.

The thoroughly revised fourth edition includes an updated and rewritten chapter on temporality and significant improvements to the clarity and accessibility of the language, making it an even more valuable text for undergraduate students.
