Recent years have witnessed a surge in public awareness concerning the impact of world economic forces on cities. In this challenging book, the author argues that though the consciousness is new the phenomena themselves are not. For the past two centuries at least, world economic, political and cultural forces have been major factors shaping cities, patterns of urbanization and the physical and spatial forms of the built environment. Anthony King believes that the historical context of contemporary global restructuring must be recognized if present-day urban and regional change is to be properly understood. He explores and documents the cultural and spatial links between metropolitan core and colonial periphery and examines the historical foundations of the world urban system. He also looks at the social production of building and urban form, and demonstrates their potential for understanding economic, political, social and cultural change on a global scale.

The creator of the immensely popular Salad for President blog presents a visually rich collection of more than 75 salad recipes, with contributions and interviews by artists/creative professionals like William Wegman, Tauba Auerbach, Laurie Anderson, and Alice Waters. Julia Sherman loves salad. In the book named after her popular blog,
Sherman encourages her readers to consider salad an everyday indulgence that can include cocktails, soups, family style brunch dishes, and dinner-party entrées. Every part of the meal is reimagined with a fresh, vegetable obsessed perspective. This compendium of savory recipes will tempt readers in search of diverse offerings from light to hearty: Collard Chiffonade Salad with Roasted Garlic Dressing and Crouton Crumble, Heirloom Tomatoes with Crunchy Polenta Croutons, or Flank Steak and Bean Sprouts with Miso-Kimchi Dressing. On the lighter end there are Grilled Hearts of Palm with Mint and Triple Citrus, Persimmon Caprese, and fresh Blood Marys. The recipes, while not exclusively vegetarian, are vegetable-forward and focused on high-quality seasonal produce. Sherman also includes insider tips on pantry staples and growing your own salad garden of herbs and greens. Salad—with its infinite possibilities—is a game of endless combinations, not stifling rules. And with that in mind, Salad for President offers a window into how artists approach preparing their favorite dishes. She visits sculptors, painters, photographers, and musicians in their homes and gardens, interviewing and photographing them as they cook. Utterly unique in its look into the worlds of food, art, and everyday practices, Salad for President is at once a practical resource for healthy, satisfying recipes and an inspiring look at creativity.

Pan Am's World Guide

This book prescribes rapid revolution in principal sectors of this African economy through radical paradigm changes. And the resultant comprehensive transformation will guarantee significantly higher productivities and double digit annual economic growth. Included in this paradigm shift is the joint reindustrialization of the African economy and the US ailing industries via a new Strategic trans-Atlantic Alliance modeled on the balanced Euro-US cooperation
after World War II. But it first takes readers through a thorough evaluation of the familiar subject - corruption - which haunts Nigeria, the principal economy in the continent. The fundamental difference with other texts on the subject is that this book identifies the most debilitating variant of that corruption. That variant causes massive capital flight from a post-colonial "soft economy" that is neither capitalist nor socialist. The Nigerian corruption thrives on the native Philosophy of Commission hardened by intractable "tribalism" that coagulated and ossified with the imports substitution pattern preferred by European firms since independence. The book then proceeds to earn its priced revolutionary credential by inventing very novel scientific methods that will skillfully turn this insidious source of structural rigidity and arrested development into a force for economic growth. A new apex political leadership culture is recommended and to be fortified with a unifying lingua franca. An inter-ethnic marriage melting-pot is advised for intensified nigerianization of Nigerian youths at birth. Spiritual diversity is envisaged to significantly diminish religious intolerance and sectarian violence. Modern bureaucracy and inward-looking tourism are reformulated to reduce effervescent insecurity and minimize capital flight. The resultant economic stability will enlarge domestic/foreign investment inflow; and will reverse the current dis-industrialization, and massive job loss, and the conditions of under-full employment. Technological Functionalism, Economic pan-Africanism, and the Alternative Policy of Inputs Substitution are among the several brand new blueprints that this book offers for the extensive transformation of Africa's economy into the robust emerging economy that will rival its counterparts in India and China in the immediate future.

In the second decade of each century, a new global order commonly starts to assert itself. In the 19th, Napoleon's defeat gave birth to the world of rivalrous European powers. In the 20th, the First World War triggered a wave of revolutions that cleared a path for the American era. Ours appears to be no different. The world is once again on the move; China extends its influence across the globe; Europe is struggling to maintain unity and the United States looks hollowed out by its own past adventures. Meanwhile Russia is up to a lot of startlingly bold new tricks. In this expanded new edition of The World in Conflict, John Andrews tackles head-on the reasons why global violence is ever-present in our lives. He analyses every single one of today's major conflicts region by region, considering the causes, contexts, participants, impacts and likely outcomes. He looks at recently-ended wars that still spawn intermittent fighting. And he considers where, why and how new conflicts might erupt. This is a must-read for our interesting times, a guide to our new world of terrorism, kompromat and cyber war, shifting powers and enduring strife. If you want to know who is fighting where, for what, and whether they can win, The World in Conflict is indispensable.

The World in Conflict

This volume aims to question, challenge, supplement, and revise current understandings of the relationship between aesthetic and political operations. The authors transcend disciplinary boundaries and nurture a wide-ranging sensibility about art and sovereignty, two highly complex and interwoven dimensions of human experience that have rarely been explored by scholars in one conceptual space. Several chapters consider the intertwining of modern philosophical currents and modernist artistic forms, in particular those revealing formal abstraction, stylistic experimentation, self-conscious expression, and resistance to traditional definitions of “Art.” Other chapters deal with currents that emerged as facets of art became increasingly commercialized, merging with industrial design and popular entertainment industries. Some contributors address Post-Modernist art and theory, highlighting power relations and providing sceptical, critical commentary on repercussions of colonialism and notions of universal truths rooted in Western ideals. By interfering with established dichotomies and unsettling stable debates related to art and sovereignty, all contributors frame new perspectives on the co-constitution of artworks and practices of sovereignty.

Stop Global Street Harassment: Growing Activism around the World

In the wake of the so-called information technology revolution, many stakeholders from the public and private sectors (including citizens) have indeed grown accustomed to the promise and usability of spatial data infrastructures (SDI) for data access, use, and sharing. Analyzing the obstacles as well as the processes and mechanisms of integration and implementation, Spatial Data Infrastructures in Context: North and South investigates the technological and the non-technological aspects of the widespread adoption of spatial data infrastructures. Supporting theoretical issues with empirical studies, the editors pay particular attention to the non-technological aspects of organizational, financial, and legal issues including owner rights, liability, copyrights, and compatibility with precedent and supercedent laws. The authors also highlight the importance of understanding the local environment and circumstances in the process of tailoring the approaches to the conditions that characterize societies of different cultural, institutional, and economic settings. Designed to improve the accessibility, interoperability, and affordability of spatial data, the book focuses on the increasing challenges associated with integrating individuals and organizations into a network to support (1) public authorities and administrations at various levels, (2) thematic user communities, (3) enterprises, and (4) citizen-oriented society as a whole. It addresses the implementation and development of spatial data infrastructures for a wide range of themes, applicable technical standards and protocols, and specific organizational issues unique to data policy. Highlighting the potential for profound changes to the access, use, and exchange of spatial data for citizens, organizations, and geographically related applications, and therefore to the role and interaction of the stakeholders from the public and private sectors, this timely contribution provides new insights into improving our understanding of the increasing relevance, applicability, and value of spatial data infrastructures.
